## parts2clean: Virtual expert forum on October 27

**It would have been the first day of parts2clean in Stuttgart. However, due to the corona pandemic, trade fairs are currently not possible. The parts2clean Online Day on Tuesday, October 27, 2020 will provide a substitute for this, and the highly regarded parts2clean expert forum will take place in virtual space for the first time. Participation is free of charge.**

Exciting expert lectures and product presentations await participants at the parts2clean online day. Instead of three days, the highly esteemed platform for knowledge transfer in the field of cleaning technology will now switch to the virtual space for one day. On Tuesday, October 27, the program will run with a total of 14 expert presentations from 10:45 to 18:00. The parts2clean expert forum enjoys an excellent reputation with its above-average quality of information and presentations, and is one of the most highly frequented event formats in the industrial trade fair landscape: More than 1,300 forum visitors profit from this platform each year.

Fraunhofer Cleaning acts as the technical director of the parts2clean Online Day. Current topics and processes from the field of industrial parts and surface cleaning will be presented, as well as future-oriented technologies, trends and the latest scientific findings. The event is divided into three sessions on cleaning processes, digitalization/automation and analytics/technical cleanliness.

After each lecture, the audience can ask their questions directly. There is also the possibility for chat and live discussions with the speaker and other participants in a separate virtual "Speakers Corner" parallel to the ongoing lecture program. In addition, a room for breaks and a virtual foyer will be created as additional digital places for free exchange and networking among participants, speakers and organizers.

Participation in the parts2clean Online Day is free of charge. Only a registration is required. The event and all lectures will be held in German language with presentation slides in English version.

The detailed program of the parts2clean Online Day as well as the possibility for registration can be found under the following link:
